Sliding Window Concept

Fix Size Window

Given - window size and condition

```
while(j<size)
{
        Calculations
        if(window size < k)  // where k is a condition
            j++
        else if(window size == k)
        {
                ans <-- Calculations
                Calculation remove i

                Window size maximum and slide
        }
}
return  ans
```

Variable Size Window

window size is not given

Given - only condition

```
while(j<size)
{
        Calculations
        if(condition < k)
            j++
        else if(condition == k)
        {       ans <-- Calculations
            j++
        }
        else if(condition > k)
        {
                while(condition > k)
                {
                        Remove calculation for i
                        i++
                }
                j++
        }
}
return  ans
```
